

# Dipesh Patel

✉ dipesh.patel@gov.ab.ca 📞 (587) 974-6532 📍 Edmonton, AB in [LinkedIn](#) 🐙 [GitHub](#) 🌐 [Website Portfolio](#)

## Education

**University of Alberta**

*BSc in Computer Science with MATH minor*

*Sept 2021 – April 2025*

## Skills

**Languages:** C#, Java, JavaScript, SQL, Python, C++, HTML, CSS, Bootstrap

**Libraries & Frameworks:** ASP.NET Core MVC, Entity Framework Core, Angular, React, jQuery, Flask, Django

**Database:** SQL Server, MySQL, Oracle, PostgreSQL, Firebase, MongoDB

**Tools:** Power Automate, Power BI, Excel, Oracle BI, GitHub, MS Power Query, DAX, SharePoint, Git

**Misc.:** Web API, Azure, Application Lifecycle Management, Agile methodologies, System Analysis, Application Support & Maintenance, Security Threat and Risk Assessment (STRA), JSON

## Experience

**Government of Alberta**

*Program Solutions Analyst*

*Edmonton, AB*

*April 2025 – Present (Full-time)*

- Developed automated reporting tools using C#, SQL, and SQL Server Data Tools in SSMS, improving data accessibility by 50% and reducing manual reporting effort by 40%.
- Led SharePoint development and migration projects, managing interns to deliver compliant platforms, and boosting content management efficiency by 70%
- Modernized data workflows using Power Automate, SharePoint, and SQL Server, cutting processing time by 80% and boosting efficiency by 85% across 100+ monthly applications.
- Conducted routine system maintenance and end-to-end testing to ensure application reliability, optimize performance, and support ongoing operations across the branch's core systems.

**Government of Alberta**

*Grants Support Tech*

*Edmonton, AB*

*June 2023 – April 2025 (FT: 8, PT: 11 months)*

- Developed complex SQL queries to retrieve, manipulate, and integrate data from multiple sources, ensuring accurate and actionable insights for performance improvement.
- Designed interactive Power BI dashboards using advanced data modeling and DAX formulas, integrating Oracle Database to improve decision-making efficiency by 70%.
- Prepared and maintained live data reports, reducing monthly reporting and preparation time by 50%. Supported the development of new performance measures to monitor efficiency and effectiveness of departmental initiatives.
- Independently designed, and built, and SharePoint site to enhance team collaboration and information management. Integrated SharePoint with Power Automate to automate workflows and improve operational efficiency.

## Projects

**Grants Evaluation & Management System (GEMS)**

- Designed and developed a grant management web application using ASP.NET Core MVC with Razor Pages and Bootstrap for the UI.
- Used SQL Server for grant data storage and implemented secure user authentication with ASP.NET Identity.
- Integrated a Python Flask API hosting a simple machine learning model to automatically score grant applications, communicating via REST API between the C# backend and the AI service.

**PCL Construction Inc. & University of Alberta**

*BIM Model Graph Creation (AI Capston)*

*Jan 2025 - Apr 2025*

- Developed Graph Neural Networks (GNNs) and Bayesian Neural Networks (BNNs) model using Python to predict probabilistic connectivity in BIM models, improving clash detection and decision-making in construction.
- Using PyTorch Geometric to structure BIM model data into graph representations, train models, and enhance prediction accuracy.
- Leveraging NumPy, Pandas, and Matplotlib for data processing, feature engineering, and visualization, ensuring insights are interpretable for stakeholders.
